

DRAFTLINE[®]

BEER LINE CLEANER

Our wide range of Beer Line Cleaners

It's no secret that breweries and on-premise establishments need proper sanitation to allow the ultimate taste of their beer to shine through. Over time, biofilms and beerstone (calcium oxalate) have a tremendous effect on the ability to maintain both freshness and taste. Once established, these buildups are very difficult for common chemicals to remove. Our Draftline products have been developed specifically to do just that - remove the toughest buildup when used on a regular basis!

Draftline is considered by many in the industry to be the most advanced, best performing products for cleaning draught beer lines and brewery equipment. These products utilize our proprietary additive package which allows for maximum efficiency and increased rinsability.

Draftline Beer Line Cleaner contains BDP's unique surfactant technology designed specifically to reduce surface tension and allow the product to reach areas that other products cannot. Buildup around fittings, taps and fob Detectors are no longer an issue. Another unique advantage is the inclusion of a coloring agent designed to increase safety. BDP's Draftline Beer Line Cleaner contains a blue colorant signifying an alkaline solution. The product is specifically designed to attack inorganic and organic soils that naturally occur over time.

The main benefits with Draftline

One of the main benefits of DraftLine is achieved through the use of proprietary surfactant technology. This unique advantage provides superior cleaning especially in difficult areas, such as John Guest fittings, taps and fob detectors.

Draftline should be mixed in 1:10 cold water, at this ratio it is very efficient. If the beer lines are fairly clean you can go down to 1:25 ratio. Draftline contains no added chlorine or chlorites that may permanently damage the lines and stainless steel parts over time.

The Cleaning procedure

With Draftline you only fill the lines once with solution. Simply open and close the beer taps a few times during the cleaning process to agitate the cleaning solution. The whole procedure will take approximately 20 minutes.

The blue coloring agent allows the user to see when the lines have been thoroughly rinsed of solution. Please read the product manual thoroughly before using this product.

- 3 different sizes; 1, 5 and 10 liters
- Draftline – 30 % NaOH for fast, powerful cleaning of dirty beer lines.
- Draftline¹⁵ – 15 % NaOH for normal cleaning of less dirty beer lines.

Draftline – 1 L

Draftline – 5 L

Draftline – 10 L

Draftline¹⁵ – 1 L

Draftline¹⁵ – 5 L

Draftline¹⁵ – 10 L

Quick facts:

- Sodium Hydroxide (also known as Caustic or Lye).
- Contains surfactants to lower the surface tension.
- Contains no chlorine or chlorites.
- Blue coloring agent for safety.
- Odorless.
- Draftline may be used in cold water and is formulated for all water conditions (hard, medium, soft).
